Have Fun with these Summer Activities

Summer has officially started, which means you will likely be spending more time playing outdoors. Let's go over a few fun activities that will help you earn some money or new skills for the future!

- 1. Start a garden.** The best time to plant seeds outside is during spring and summer. You can plant herbs, fruits, and vegetables that you can use for cooking later in the year!
- 2. Organize a garage sale.** In order to make room for new things in your life this year, you should clear out some old things. What's taking up space that you don't use anymore? Consider selling these items and saving the cash you make for something special!
- 3. Donate your old things.** Some people are not able to buy new toys or clothes. If you're ready to let go of some of your old favorites, consider donating them to someone else who will enjoy them.
- 4. Open a lemonade stand.** Opening a lemonade stand can be a fun way to "squeeze" some money out of your thirsty neighbors and earn cash to buy yourself cool clothes or a shiny new bike!
- 5. Go to a park.** Have you ever seen the beach? Do you want to go camping? Have you ever been on a roller coaster? There are so many new things you can experience. Grab your parent or guardian and go exploring!

Roller Coaster Math!

If you love roller coasters, try to solve the following challenges!

If a roller coaster has 5 giant drops and 1 loop-de-loop, how many chances to scream will you get?

Answer: 6 chances to scream.

If your roller coaster car holds 12 people, and half of them are screaming after the first drop, how many people are screaming?

Bonus: If you can stuff 8 more people in that car and only half of them are screamers, now how many screamers are there?

Answer: 6 people. Bonus: 10 screamers, since you added 4 more.

If the fastest roller coaster goes 150 miles per hour, and the fastest you've been driven in a car on the road is 80 miles an hour, how much faster does the coaster go?

Bonus: If the coaster runs $\frac{2}{3}$ as fast as its top speed down the second drop, and then only $\frac{3}{4}$ of that second speed on the 3rd drop, how fast do you zoom on the 3rd drop?

Answer: 70 miles an hour. Bonus: 75 miles an hour, since you go 100 miles an hour on the second drop.
